| Arce-Esquivel, Arturo | - Vascular function in health and disease.  
                        - Cardiovascular effects of exercise.                                                                                                                        |
| Cooper, Cheryl        | - Global health.  
                        - Health education.                                                                                                                                               |
| Criswell, David       | - Aging and skeletal muscle function.  
                        - Exercise-induced cellular signaling in skeletal muscle.  
                        - Myokine release during muscle contraction/skeletal muscle as an endocrine organ.                                                                             |
| Dong, Neil            | - Biomechanics of human movement.  
                        - Osteoporosis and prediction of bone strength.  
                        - Bone microarchitecture.                                                                                                                                         |
| Francis, Jimi         | - Nutrition and health.  
                        - Lactation and breastfeeding.  
                        - Infant overfeeding.                                                                                                                                             |
| Fletcher Njororai     | - Public health and health education among immigrant and refugee populations.                                                                                                                                         |
| Wycliffe Njororai     | - Physical education.  
                        - Sport in African society.  
                        - Africans in the global sport community.                                                                                                                          |
| Sorensen, Bill        | - Cognition or behavioral research.  
                        - Methodology and research design in health studies.  
                        - International or global health, or acculturation.  
                        - Epidemiology.                                                                                                                                                    |
| Spier, Scott          | - Cardiovascular adaptations to exercise.  
                        - Vascular endothelial function in cerebral arteries.                                                                                                               |
| Tseng, Ben            | - Motor deficits, gait abnormalities and other early behavioral/biomarkers in early Alzheimer patients.  
                        - Physiologic mechanisms of exercise improving/preserving brain structure & function.  
                        - Brain white matter integrity in stroke and Alzheimer patients (MRI studies).  
                        - The role of arterial stiffness in maintaining cerebrovascular health.                                                                                               |
