EX/L
PROJECT

THE GRADUATE SCHOOL

Graduate Admissions EX/L Project Proposal

Project: Grad School App

Purpose of the Project: To provide the Graduate School with an app for ios and android.

Learning Objectives: Gain real-life experience transforming client needs and design ideas into a functional app for both Apple and Android devices.

Responsibilities: Meet with The Graduate School to discuss preferred outcomes, uses, and design ideas. Move forward with the creation of applications based on the Graduate School's needs/desires. Keep the department up to date with progress and clarify any uncertainties along the way.

Outcome: The student will gain hands-on experience developing android and ios applications. This is also a great opportunity to practice communicating with a client or supervisor on anticipated outcomes and making those desires into a reality.

The Graduate School will gain a multifunctional app that enhances the student experience by bringing our many services, events, and opportunities into one easily-accessible place. This will increase awareness and visibility of the Graduate School to both current and prospective students.
