COMH 5310 - Foundations of Program Evaluation Fall semester, 2025 Online (.060) section

Instructor Name: William Sorensen, Ph.D. Professor

Office Location & Times: HPC Rm #3095 (email the instructor to set a time if

you wish to meet).

Phone: Blair Zdenek (program admin) 903.877.5925

E-mail: wsorensen@uttyler.edu or bsorensen@uttyler.edu

Format: The course is all online. Canvas is the "platform" for course documents or quizzes.

Communications are done through Canvas or email. Set your Canvas notifications so that you receive Canvas announcements automatically through your email. Make a constant schedule whereby you log into your university email account and Canvas account several times each week.

Class Location & Times: The class is considered "asynchronous"- no meetings- the schedule is set by the student at the student's convenience, except for due dates or other chores (quizzes)

Required Text: no textbooks, but several free PDF documents needed; these will be posted in Canvas, or the links will be posted in Canvas.

Catalog Description: This course provides an overview of the principles of program evaluation. It explores the methods associated with the systematic evaluation of public health education programs. Students will learn the skills needed to plan, conduct and critique evaluation research. The content of the course includes program logic models, formative, process, impact, outcome and summative evaluation; theory-driven evaluation; a review of validity issues as they relate to evaluation; sampling in a complex context; operationalizing variables; assessment of measurement instruments; and analysis of quantitative evaluation designs. In addition, issues that impact evaluation across the ecological model, specifically the importance of context and equity issues, will be examined. Qualitative methods used in program evaluation and mixed-method designs for evaluation will be highlighted. Supporting the needs of stakeholders[*] in the evaluation will be emphasized.

Course Objectives: Upon successful completion of this course students will be able to:

- 1. Define practical program evaluation, describe reasons for conducting an evaluation;
- 2. Identify and describe how to engage program stakeholders*;
- 3. Describe a program in specific terms that facilitates evaluation, including identification of the outcome objectives, logic model, context, and activities;
- 4. Focus an evaluation on specific questions that will provide useful information to stakeholders*:

- 5. Identify methods and resources for gathering credible evidence to address selected evaluation questions;
- 6. Describe considerations in drawing justifiable conclusions about a program, based on the selected evaluation questions and methods;
- 7. List characteristics of evaluation findings that make them useful.

Letter grade-percentage transposition:

A: 91% - 100% D: 61% - 70% B: 81% - 90% F: below 61%

C: 71% - 80%

Grading Plan:

Project 45%

Quizzes 20% (4 @ 5 points)
Critiques of current published evaluation 20% (2 @ 10 pts)
Exploring-tasks 15% (3 @ 5 pts)

Project:

A project- evaluation plan- covers most of this course: The student creates an ideal public health program from his/her imagination/experiences. There are two PDF texts used for this project, one is from 2011, the other from 2024. In between these times, steps and standards have changed, therefore the students needs to be aware of which document offers what.

The student will first describe his/her project idea in a Discussion folder whereby students see each other's ideas, but there will also be dialogue from the instructor and possible changes to be made. Once the project is "approved" the student uses the notions of Evaluation Steps and Standards to flesh out the project, working through workbook exercises (note in the schedule 1½ weeks are allotted per each of the 6 steps). From the 2011 document, pg. 88, it lists the basic elements of the evaluation plan:

Title page Evaluation focus

Question overview Methods

Intended use and users

Program description

Analysis and interpretation plan

Use, dissemination, and sharing plan

Consider this list as the backbone as the student fills out the project. No length requirement, single spaced, 12-point font, 1" margins.

Critiques: The student will complete two critiques of different published evaluations reports. He/she may refer to evaluation steps and standards, or not. Please critique the methods and not the topic. (In a way, this is an evaluation of an evaluation report.) 3-4 pages in length, double spaced, 12-point font, 1" margins.

Quizzes: These are timed multiple choice questions, mostly "knowledge" which assesses your memory and basic understanding of evaluation concepts.

^{*&}quot;Stakeholders" to some experts is an outdated term; there may be a more current expression.

Exploratory-tasks: These are smaller assignments whereby the student goes outside the confines of our project parameters to explore what is happening in other disciplines, or looking at other methods/models. A set of questions will be posted to students about 4 weeks before each exploratory-task is due.

No Make-ups: On the graduate level, the instructor expects no late projects or assignments.

Communications: In regards to questions about the "mechanics" of the class, please communicate through the Canvas discussion folder called "Administrative issues". This allows both questions and responses to questions to be seen by everyone. More generally, please do not send the instructor an e-mail message or a private Canvas-"inbox" message about the mechanics of the course. If you must communicate with the instructor privately, send him an email through regular email.

If References are used: the style specified in the latest APA Publication Manual (American Psychological Association. This includes in-text references and reference lists. Invest the time early on to learn APA style.

Al statement (starting in the fall of 2024, UT Tyler expects every course syllabus to include an Al statement): Al is permitted, AND the student must acknowledge it in his/her references. Be aware too of Dr. Sorensen's observation that Al is not a good writer; Al generated written pieces are 1. Repetitive, 2. Use a lot of jargon, and 3. Are not concise. The instructor believes that the individual graduate student can do better than Al.

Competencies for MPH Students (relevant to this course in green)

Evidence-based Approaches to Public Health

- 1. Apply epidemiological methods to settings and situations in public health practice.
- 2. Select quantitative and qualitative data collection methods appropriate for a given public health context.
- 3. Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming, and software, as appropriate.
- 4. Interpret results of data analysis for public health research, policy or practice.

Planning & Management to Promote Health

- 7. Assess population needs, assets, and capacities that affect communities' health.
- 8. Apply awareness of cultural values and practices to the design, implementation, or critique of public health policies or programs.
- 9. Design a population-based policy, program, project, or intervention.
- 10. Explain basic principles and tools of budget and resource management.
- 11. Select methods to evaluate public health programs.

Policy in Public Health

- 12. Discuss the policy-making process, including the roles of ethics and evidence.
- 13. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes.
- 14. Advocate for political, social, or economic policies and programs that will improve health in diverse populations.
- 15. Evaluate policies for their impact on public health and health equity.

UT Tyler POLICIESSee Canvas module "Getting started" for University policies.
