

BIOT 5222L Advanced Metabolism - LAB Credit Hours: 2

Semester: Spring Year: 2019

Class Day/Time: Tuesdays, 1:30-5:30p Class Location: BMR 116 & Lab B4

Instructor of Record: Dr. Mitsuo Ikebe Coordinator

Office: BMR 401 Office Phone: 903-877-7332

E-Mail: Mitsuo.lkebe@uthct.edu

Office Hours: Thursday between 4 to 5 P.M. and other times with appointment

**Course Description:** Lab Component. The primary objective of this course is to learn how to plan and perform experiments broadly related to metabolism, and analyze and interpret the experimental data.

Prerequisite: BIOT 5312 Co-requisite: BIOT 5222

## **Goals of Course & Course Objectives:**

# Course Objectives:

- 1. To demonstrate the ability to obtain laboratory results within a prescribed period of time marked by milestones.
- 2. To understand the basic principles and best practices of maintaining a proper lab notebook.
- 3. To be able to design and carry out an experiment to measure the biochemical characteristics of enzymes, calculate, plot and interpret kinetic data.
- **4.** To be able to design and carry out experiments related to membrane biology and signal transduction.
- To be able to understand the methods and carryout experiments for measuring the contractile activity of muscle tissues.
- 6. To be able to isolate blood cells and study blood clotting reactions.
- 7. To be able to analyze the experimental data and prepare a formal lab reports.
- 8. To be able to communicate and discuss the basic theory and practice of experiments performed in the class.

## **Student Learning Outcomes (Course Competencies):**

- 1. The student will be able to learn the practice of good lab notebook recording
- 2. The student will be able to learn how to use common laboratory equipment
- 3. The students will be familiar with graphic and analytic tools available to presentation of experimental data and analysis of data
- 4. The student will be able to prepare and manipulate lipid vesicles.
- 5. The student will be able to assay enzymatic activity and determine kinetic constants.
- 6. The student will be able to understand one or more methodology available for studying signal transduction.
- 7. The student will be able to prepare samples from rat small intestine to measure the length-tension relationship and able to assay the effect of extracellular Ca<sup>2+</sup> concentration in muscle contraction.
- 8. The student will be able to fractionate blood cells, identify different blood cell types, and measure blood clotting reactions.

#### Course Assessment/Methods of Evaluation:

The student will be evaluated based on class participation, ability to follow oral and written instructions in performing experiments, basic understanding of the concept, methods and procedures of experiment that will be performed, successful completion of experiments, keeping the lab note book, and providing lab reports. Maintaining the lab note book and providing the formal lab reports will have more weightage than all other assessments. Students who successfully complete the course will demonstrate a thorough understanding of fundamental metabolic, cellular and enzymological principles used in biotechnology, including basic background information, theory and application.

- Keeping Lab Notebook: This will be based on recordkeeping, writing and data analysis in the lab notebook (5% of grade) in timely fashion. The copy of appropriate portion of lab notebook will be due at 5:00pm on the next day. Get the signature from the instructor and leave a copy of appropriate pages in the office of Instructor of Record by 5:00pm of Wednesday (the next day after the lab).
- Written Lab Reports: There will be seven reports written in correct scientific technical format will be scored based on content, clarity, and quality of writing. The full lab reports must include the following sections: Title, Summary (including purpose), Introduction (including Background), Materials and Methods, Results, Discussion, References. The short lab report must include the following sections: Title, Purpose, Materials and Methods, Results, Discussion. Due Date is one week after the lab at 5:00pm. (75% of grade)
- **Examinations:** There will be non-comprehensive exams (a final) on the subjects that do not assign the lab report. The exams will be of a subjective format based on preceding lectures and are their worth is proportionate to number of classes covered for the exam in the final grade calculation.
- All documents have to be typed, and handwritten documents are not acceptable.
- Class Participation and Attendance: Punctual attendance is critical, and active
  participation in lab experiment is very important. It is critical to sign (legibly) the
  sign-up sheet for each class to record your attendance. Students are expected to
  be in attendance for the majority of the class time. If not, students will not get fullcredit for attendance. Tardiness of more than 30 min may not get full credit. (20%
  of grade)
- Each lab will have 100 points. A lab module that extends to two lab classes will have 200 points (full lab report).
- A grade of less than a B may result in loss of Graduate Assistantships.
- No grades will be withheld for completion of work except in extreme circumstances.
- Every attempt will be made to hand out reading assignments and descriptions of lab procedures one week prior to their performance. Therefore, students will be expected to be prepared at the beginning of each lab.
- Lab reports will be expected to be formal write-ups with an emphasis on computer manipulation and presentation of data as is expected in industry and research

laboratories. Most of these reports should have a Title, Purpose, Summary, Background, Materials, Methods, Results, Discussion, References and Answers to and questions posed.

Work turned in late will lose 5% (1 day late), 10% (2-3 day late), 20% (4-7) and 30%(7-14) of the points possible. More than 14 days late loses additional 5% off of the points possible per additional week. Reports turned in more than four weeks late will not be accepted.

## **Linked Program Learning Outcomes:**

The student learning outcomes listed above address the following Biotechnology Program PLOs:

- PLO-1. The student will demonstrate English communication skills in both oral and written forms.
- PLO-2. The student will demonstrate mastery of basic and advanced biotechnology methods
- PLO-3. The student will demonstrate the ability to safely operate basic and advanced laboratory equipment, analytic devices and computers.
- PLO-4. The student will demonstrate independent and critical thinking skills integrated with the ability to utilize multiple informational resources.
- PLO-5. The student will explain the principles, mechanisms and interrelatedness of both in vivo and in vitro biochemical, molecular biological and genetic processes.

### Textbook:

Biochemistry (4th Edition), by Donald Voet and Judith G. Voet, © John Wiley & Sons, Inc., 2011; ISBN 978-0-470-57095-1

Course Content: Enclosed

### Other Class Policies:

#### Attendance:

Regular or punctual attendance is expected. If a student misses a class or lab, the student is responsible for obtaining any information distributed during those times. Make-ups are possible only under certain instances (labs cannot be made up). Arrangements for any make-ups and/or missed labs should be discussed directly with the instructor for that day's class.

#### Academic Honesty:

Any student who commits an act of scholastic dishonesty is subject to discipline. Scholastic dishonesty includes, but is not limited to, cheating, plagiarism, collusion, the submission for credit of any work or materials that are attributable in whole or in part to another person, taking an examination for another person, any act designed to give unfair advantage to a student or the attempt to commit such acts.

# Cheating

Dishonesty of any kind involving examinations, assignments, alteration of records, wrongful possession of examinations, and unpermitted submission of duplicate papers for multiple classes or unauthorized use of keys to examinations is considered cheating. Cheating includes but is not limited to:

- Using or attempting to use unauthorized materials to aid in achieving a better grade on a component of a class.
- Falsifying or inventing any information, including citations, on an assigned exercise.
- Helping or attempting to help another in an act of cheating or plagiarism.

## <u>Plagiarism</u>

Plagiarism is presenting the words or ideas of another person as if they were your own. Materials, even ideas, borrowed from others necessitate full and complete acknowledgment of the original authors.

Offering the work of another as one's own is plagiarism and is unacceptable in the academic community. A lack of adequate recognition constitutes plagiarism, whether it utilizes a few sentences, whole paragraphs, articles, books, audio-visual materials, or even the writing of a fellow student. In addition, the presentation of material gathered, assembled or formatted by others as one's own is also plagiarism. Because the university takes such misconduct very seriously, the student is urged to carefully read university policies on Misconduct in Research and Other Scholarly Activity 05.00. Examples of plagiarism are:

- Submitting an assignment as if it were one's own work when, in fact, it is at least partly the work
  of another.
- Submitting a work that has been purchased or otherwise obtained from an Internet source or another source.
- Incorporating the words or ideas of an author into one's paper without giving the author due credit.

### Grade disputing:

The instructor of the class is the primary authority with respect to a student's proficiency and the grade in that class. A student who believes that his or her grade in a specific class reflects a capricious, arbitrary or prejudiced academic evaluation of the class and would affect the final grade, the student should first discuss the matter with the instructor of the class as soon as possible he/she knows the grade.

If no satisfactory resolution is reached with the instructor, or if the instructor is unavailable, and the student wishes to appeal, the student shall appeal to the course director. If the course director is unavailable, the dispute involves the course director or the decision of the course director is not acceptable to the student, the student may initiate a formal grade appeal in writing with the department head within two weeks of the last day of the semester in which the disputed grade was earned. Once a formal grade appeal is initiated, the appeal process will undergo the standard, the university-wide formulated appeal process.

## Adding/Dropping:

The official deadline for adding and dropping courses is as published in the academic calendar and Graduate Bulletin (typically the day before Census Day). However, students are strongly encouraged to meet with their graduate advisor or the Program Coordinator prior to adding/dropping courses. Movement into and out of classes after the 4th class day requires approval of the Program Director. Students can drop until mid-semester without a WP or WF. Drops after mid-semester require approval of the Dean. Each student is responsible for their own enrollment status with the university.

### **Disability Accommodations:**

UTHSCT abides by Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act, which mandate reasonable accommodations be provided for students with documented disabilities. If you have a disability and may require some type of instructional and/or examination accommodations, please contact me early in the semester so that I can provide or facilitate provision of accommodations you may need. If you have not already done so, you will need to register with the Student Services Office (located on the UT Tyler Campus). You may call 903-566-7079 for more information.
