Project: 360 Campus Map

Purpose of the Project: To provide on campus students a virtual view of their location and online students a first person experience of the UT Tyler campus.

Learning Objectives: Demonstrate mastery of 360 photo and video, evaluate user analytics and use cases, identify other use cases and apply construction model, formulate and propose expansion of existing model with departments across campus

Responsibilities: The student will work with ODL staff to complete the construction of a campus virtual map using 360 video technology. The student will expand the map scope and detail through liaising with departments across campus. The student will evaluate user feedback and analytics to help set direction for future development of the map. The student will help identify new projects for this technology and process. Will report to the Learning Management Administrator.

Outcome: Accurate and detailed virtual map of the full Tyler campus utilized by on campus and online students. Target usage is TBD.
