| $\$ 200,000-\$ 299,999$ | 2.3 |
| $\$ 300,000$ or more | 1.1 |
| Total $=1,096$ |  |

## Methodology

The UT Tyler-Texas Opinion Survey poll was conducted using random sample of the registered voters that have opted-in to take surveys through a company called Dynata. The online panel generated a sample of 1,199 registered voters during a three day period from between September 13 and September 15.

The data were weighted to be representative of the Texas register voter population. Iterative weighting was used to balance sample demographics to the state population parameters. The sample is balanced to match parameters for gender, age, race/ethnicity, and education using an iterated process known as raking. These parameters were derived from 2018 Current Population Survey to reflect Texas's electorate. The use of these weights in statistical analysis ensures that the characteristics of the sample closely reflect the characteristics of registered voters in Texas.

In this poll, the sampling error for 1,199 registered voters in Texas is $+/-2.8$ percentage points at a 95 percent confidence interval. The survey's design asked additional questions to 474 registered voters who identify with the Democratic Party as members or independents that lean towards the party (margin of error of $+/-4.5 \%$ ).
