CHEMICAL CONTAINER
Waste Accumulation Log

Instructions:
- This log sheet is required for each waste container where similar and compatible wastes are collected.
- Complete a new line in the chart each time additional waste is added to the container.
- Complete all columns of the chart, do not abbreviate chemical names.
- Make sure that all wastes are chemically compatible before placing in the container. Wastes must be segregated according to the type of hazard present.
- Use only chemically compatible containers and label properly.
- Attach an appropriate waste label to the container marked with the container number and all appropriate information.
- The generator is responsible for the identification of the waste.
- When the waste container is full, mark it as full, close the container and weigh it. Log the container and weight on your SAA Log.
- Keep this form with the container until it is full then place it in the SAA Binder.
- For more detailed instructions refer to the Hazardous Waste Program which is available through EH&S.
